

## Livingston Community Water Authority Grand Opening

HAMBURG, MI - Another project benefits from AOPs Design-Build Process. The Michigan townships of Hamburg, Green Oak, and Brighton pooled their efforts to provide an economical water solution for their residents. Due to stringent local requirements on disposal of waste water, the plant was designed with a revolutionary Zero Impact Process (ZIP). In which no waste water will leave the plant site. On December 10, 2007

AOP employees fired up the grill and served hamburgers to the crowd of people at the ribbon cutting ceremony. The new WTP utilizes M.A.R.I.S. media to filter out the Manganese, Arsenic and

Iron in the raw water to undetectable levels. The 665,280 GPD design allows for an inexpensive upgrade to ion-exchange softening as well as increases in capacity for future growth.

**Congressman Mike Rogers was on hand for the Ribbon Cutting Ceremony.**
