

## New Water Plant to Supply Water for Turnpike

WEST UNITY, OH – The nearby town of West Unity, OH now has a brand new water treatment facility. AOP will begin startup procedure of the .425 MGD water treatment project at the end of this month. The facility will not only give the residents quality water but will also help in supplying the water for the new up and coming Ohio Turnpike Plaza. The project was designed to eliminate the iron,

manganese, and hardness in the water while also increasing the capacity of the previous treatment system. The systems features include aeration and detention followed by five 5 ft pressure filters with

MARIS Media™, and two 7 ft ion exchange softeners. With AOP's experience, knowledge, and high quality equipment West Unity will be able to supply good quality water for many years to come.
